Pandelis Zembashis

CTO | Compute & Agent Infrastructure | Runtime, Scheduling & Developer Platforms

p@ndel.is | pa.ndel.is | github.com/PandelisZ | x.com/PandelisZ | linkedin.com/in/Pandelis

EXECUTIVE SUMMARY

CTO and hands-on infrastructure engineer building compute-backed AI agent platforms, secure execution systems, and developer tooling. At Cosine, led runtime and platform work for coding agents across local machines, Kubernetes/gVisor remote workers, private VPC, on-prem, and air-gapped deployments. Strong fit for OpenAI Compute Infrastructure through agent infrastructure, CaaS-like execution primitives, scheduling and lifecycle automation, observability, benchmarking signals, reliability, and making complex compute systems usable for researchers, product engineers, and enterprise operators.

PROFESSIONAL EXPERIENCE

Cosine | CTO | Oct. 2023 – Present

Applied AI lab building coding-agent runtimes, sandboxed compute, developer tooling, and private deployment infrastructure.

- Lead product and engineering for Cosine's AI coding platform, setting direction across runtime architecture, cloud agents, secure compute, developer experience, observability, reliability, and deployment.
- Built the remote execution substrate for long-running agentic workloads: Kubernetes workers, gVisor/runsc isolation, ephemeral sessions, WebSocket control planes, and secure shell/tool execution.
- Designed lifecycle and recovery patterns for local-to-remote sessions, including checkpoints, replay, event logs, state propagation, and debugging hooks for failure analysis.
- Built 'cos2' as a single Go harness shared by CLI, desktop, VS Code/WebAssembly, API-server sessions, and remote worker pods, reducing runtime drift and making reliability fixes flow through one release path.
- Reworked filesystem and repository-ingestion hot paths around native Go concurrency, bundled ripgrep-class search, streaming file reads, low-overhead tool results, and predictable performance on large codebases.
- Built workload evidence around the runtime: replayable traces, tests, LSP diagnostics, checkpoints, reviews, and parallel sandboxed runs to benchmark and debug model/tool behavior under real workloads.
- Shaped managed cloud, private VPC, on-prem, and air-gapped deployments where customer code, execution logs, model artifacts, and tenant data must remain isolated, observable, and auditable.

11x.ai | Head of Engineering | Apr. 2023 – Sep. 2023

Fastest-growing UK AI startup from 0 to $1M ARR in under six months. TechCrunch coverage.

- Scaled the codebase and engineering organization behind Alice as 11x.ai grew from 0 to $1M ARR in under six months.
- Scaled outbound email and event-driven automation systems that processed millions of email chains and billions of tokens.
- Established engineering cadence, incident response habits, onboarding, and operating rhythms during rapid seed-to-Series A growth.

Papaya | Technical Lead | Feb. 2022 – Mar. 2023

Marketplace and fleet platform helping electrify commercial and last-mile logistics. TechCrunch coverage.

- Led delivery of a fleet management platform for light electric vehicles in Next.js, React Query, and Tailwind CSS.
- Modernized the Ruby on Rails backend by introducing GraphQL APIs, improving product iteration across web, operations, and marketplace workflows.
- Established development cadences, product intake, and stakeholder feedback loops that improved execution across engineering and product.

Weezy (acquired by Getir) | Senior Software Engineer | Aug. 2021 – Jan. 2022

Rapid grocery delivery startup building warehouse, ordering, and customer systems.

- Took over the core ordering and processing monolith in Ruby on Rails, owning day-to-day delivery and forward planning during a high-growth phase.
- Built warehouse operations systems and supporting AWS and Heroku infrastructure with a focus on scale, availability, incident response, and security.

finleap connect | Senior Software Engineer | Nov. 2020 – Aug. 2021

White-label fintech platform powering digital banking products and apps.

- Built GraphQL APIs on NestJS and cross-platform clients in React Native, Apollo, Node.js, and TypeScript for a multi-tenant fintech platform.
- Led alerting and observability improvements while supporting migration from ECS to Amazon Lambda.
- Owned client-specific delivery across the stack, from GraphQL resolvers and mutations to customer-facing mobile screens.

IoT CONNCTD GmbH | Full Stack Engineer | Jul. 2019 – Nov. 2020
Cloud IoT platform unifying device protocols behind a GraphQL API.

- Built frontend interfaces, SDKs, and internal tooling for a cloud IoT platform exposing a unified GraphQL API across multiple device protocols.
- Designed authentication, update, and upstream synchronization flows using TypeScript, React, MobX, and Apollo GraphQL.

Substrakt | Software Developer | Aug. 2018 – Jun. 2019
Digital product agency building bespoke publishing, arts, and cultural web platforms.

- Built bespoke WordPress features, search experiences, and internal tooling for design-led client websites.
- Modernized the JavaScript toolchain from Gulp to Webpack, improving development and deployment workflows.

D4 Software | Software Engineer | Jun. 2017 – Jul. 2018
Product engineering consultancy building client platforms, tools, and cloud infrastructure.

- Built client-facing features and internal tools across product and platform engagements using JavaScript and .NET.
- Maintained AWS infrastructure, serverless services, databases, and virtual machines while modernizing the frontend stack with Webpack, TypeScript, and Vue.js.

SELECTED TECHNICAL WORK

Why we built our own harness: Go runtime design, tool execution, replay, orchestration, gVisor/Kubernetes execution, and model feedback loops for coding agents.
Cosine CLI runtime: Single-binary distribution, native search, filesystem performance, and low-friction model/tool runtime deployment.
Tech.eu on Cosine: Coverage of Cosine's benchmark-leading coding models, sovereign AI work, and full-stack AI product strategy.

EDUCATION

Birmingham City University | Bachelor's Degree, Computer Science with Year in Industry | 2015 – 2019

AREAS OF EXPERTISE

Compute & Agent Infrastructure: Go, Kubernetes, gVisor/runsc, containers, remote workers, lifecycle automation, scheduling, secure execution, WebSockets
Reliability & Observability: Replay, checkpointing, structured event logs, failure analysis, debugging tools, incident response, benchmarking signals, production evidence
Developer & Platform Tooling: CLI systems, VS Code/WebAssembly, desktop runtimes, API-server sessions, repository search, streaming I/O, test/LSP feedback
Deployment & Security: AWS, private VPC, on-prem, air-gapped deployment, tenant isolation, RBAC/SSO, audit logs, network policy, enterprise operations
